

Labcoat with antimicrobial technology

Encompass Group introduced a new META labcoat featuring X-STATIC antimicrobial technology. The new innovation is specifically designed to protect the labcoat from bacterial growth. The X-STATIC silver technology offers comprehensive and continuous protection for the life of the garment.

The new labcoat also delivers superior comfort by regulating temperature, eliminating odors, and reducing static build-up. Silver threads run as vertical stripes through the coat.

LED exam light

Midmark's new Ritter 253 LED Exam Light is available in a mobile version as well as table mount options. The innovative light head design of the 253 is fluid and debris resistant, compared to competitive models. The power switch is ergonomically located on the light head along with focus controls, for the most

efficient use in all examinations. The 253 light provides up to 50,000 hours of light, significantly longer than typical exam room lighting. Because LED units emit very little heat, the 253 stays cool to the touch through even the lengthiest of procedures, and since most of the energy used by the device produces visible light, it consumes approximately 67% less energy than other lights.

Alcohol-free hand sanitizer

Prefense Alcohol-Free Hand Sanitizer kills germs on contact and offers continuous protection for up to 24 hours or 10 hand washings with only one application. Prefense patented formula contains a silica complex that produces a protective, invisible, moisturizing barrier that prevents the drying, redness, chapping and flaking caused by alcohol based products. Cost per application is as low as one cent per use. Prefense kills MRSA, Staph, Strep, E coli and many other germs on contact. This product is available in five different sizes for both personal and commercial scale use.

Positioning pad

The new Lap-Wrap Positioning Pad secures patients' arms by their sides during surgery or medical imaging procedures. The

easy-to-use, soft-foam pad meets AORN Guidelines for protection of the neurological structures of the elbow when keeping arms close to the body, and is ideal for laparoscopic and robotic surgeries. The hook and loop fasteners simply secure patients' arms while giving the anesthesiologist better viewing of leads, tubing and connections. No more draw sheets tucked under the patient are required, while the patent pending LapWrap also acts as a warming blanket. The latex-free, single-use pad is universally sized to accommodate any patient.

SAGE PRODUCTS

NEW PRODUCT!

The Prevalon Turn and Position System helps prevent sacral pressure ulcers by offloading the sacrum. It keeps patients positioned at the proper angle, and minimizes stress on patients due to turning and positioning. The 3-part system makes it easier for staff to turn, reposition and boost patients safely, reducing their risk of injury.
